ELECTRICAL POWER WIPES

New Electrical Power Wipes for the Electricity Supply Industry

Horizon are pleased to announce the launch of new Electrical Power Wipes from Mykal, a pre-impregnated low linting wipe containing a powerful cleaner for removal of contamination, grease and oil from electrical components.

Mykal have combined an industry established high absorbent, low lint specialist wipe with their own De.Solv.It Fast Dry Precision Cleaner (DSI 1000FD) citrus solvent. This has lead to the creation of a high performance, high quality impregnated wipe for use in the cleaning of electrical components.

The wipes have also been recommended for use with oil filled electrical equipment by EA Technology following extensive tests on behalf of the Distribution Network Operators via the Strategic Technology Programme.

For the cleaning of electrical components, including switchgear, panels, equipment, motors, cables or overhead power lines, Mykal Electrical Power Wipes are powerful enough to remove even the heaviest greases, oils and industrial contaminants.

Electrical Power Wipes are available in re-sealable pouches of 40 wipes which fit conveniently into a re-usable hard plastic container for added durability and are sold in cartons of 12 pouches with 1 plastic container.

Available exclusively from Horizon Utility Supplies

CAT. NO.	DESCRIPTION
70300	Electrical Power Wipes 1 Carton containing - 12 Resealable Pouches of 40 Wipes - 1 Rigid Plastic Container
